Module 14 – Secure coding, OOP

Here's the plan:

1. Watch the video for Module 14 (it's in the regular place on Canvas but it connects you to a video done by B Bagby on YouTube). Take notes…they will help you on the exam.
2. Read the PowerPoint. Take notes….they will help you on the exam.
3. There are no assignments for this module….but there are SEVERAL questions on the final exam. Those will be easy points if you read the material and take notes.
4. Start the final project – part 1. This is found in the Module named "Final Project". The final project will be done in several parts. Getting started early will help lessen the stress and increase your grade!!

If you need help on the project I'm here for you --- but the first thing I'll ask for is to see your outline / strategy / flowchart.   Ask early and I can get you through it. I won't tell you the answer but I will walk you through it step by step. Unfortunately if you wait until a day or two before it's due there's just not enough time to walk you step by step through it from start to finish.
